

How to Measure

How to clean your mini blinds

How often you clean your blinds is dependent on you and your family, the climate and the overall traffic through your house on a daily basis. Your blinds will attract dust, dirt, pollen, hair, grease and even bugs.

Mini, Faux and Vertical blinds should all be lightly cleaned on a weekly basis by simply dusting them with a dust rag or feather duster. Eventually, a light dusting will not remove all of the dirt, so you will need to be a little more aggressive.

Mini blinds are easy to clean and maintain. A good way to start is by opening your mini blinds, and while they are still hanging, go over them with a vacuum. Usually your vacuum will have a soft brush attachment. Run that over the slats. Then remove your mini blind from the brackets. Lay out your blinds on a padded, flat area. Make sure your mini blinds are in the closed position. Use mild soap and water (warm, not hot), maybe Windex or a diluted pine cleaner. Soap thoroughly, then rinse gently. Now either turn the blind over or open it the opposite way, and repeat the process. One important thing to remember after rinsing is to allow your mini blinds to dry completely. Make sure to use clean water to rinse to help prevent water spots. You do not want to put your mini blinds back up into the window still wet. Allow plenty of time to dry.
